

USA Military JAN Vacuum Tubes

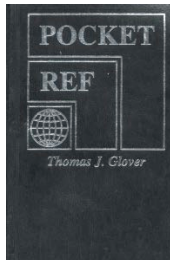

These military grade, Joint Army Navy (JAN) vacuum tubes are all new and in the original box. This listing includes many hard to find tubes from manufacturers like Philips, GE, Sylvania, Raytheon, and more. Due to an ever increasing demand plus a dwindling supply of N.O.S. (new old stock) vacuum tubes worldwide, these Mil-Spec tubes have limited availability and prices are subject to change.

Beginner's Guide To Tube Audio Design

This guide will assist the novice in understanding vacuum tube technology and prepare the reader to build vacuum tube amplifiers. The author systematically steps through single one stage amplifiers, simple gain circuits, negative feedback, output stages and transformers (including single ended types), triode and ultralinear operation, regulated power supplies, and testing. This is followed by an examination of 13 classic power and preamplifiers and how they work. A final supplement includes three projects: A line level pre-amp, an OTL power amplifier, and a test bench power supply, all published by the author in Glass Audio magazine. 132 pages. Written by Bruce Rozenbillt.

electro-harmonix Electro-Harmonix Vacuum Tubes

Electro-Harmonix is rocking the vacuum tube community with the superior quality of the "EH" series tubes. Electro-Harmonix sound effects are world renown for the soulful warmth of their analog sound and their line of "EH" premium tubes continues in this tradition of classic tone. According to the technical journal, Vacuum Tube Valley, the "...new EL34[EH] comes very close to the sonics of a Mullard EL34...". They go on to say, "The Electro-Harmonix tube is balanced throughout the entire music spectrum. Bass goes deep and is tight, mids are sweet and well defined and highs are detailed and extended." The Premium Platinum matching process consists of a 24-hour tube burn-in period followed by a bias (plate) milliamp current measurement.
