**Super Wedge Acoustic Wall Tile UL 94**

Our Super Wedge acoustic wall tiles were designed to help control low frequency response problems within a room. Virtually all rooms have 90° corners where two walls come together and meet a flat ceiling. This corner, commonly referred as a "trihedral corner", can boost bass frequencies as much as 9 dB! By placing Super Wedge tiles in the corners (in an alternating pattern) from floor to ceiling, these low frequency anomalies can be controlled.

The Super Wedge is made of open cell polyester foam that's flame retardant in accordance with UL 94 HF-1 flammability testing. The design is very pleasing to the eye while offering outstanding low frequency sound absorption qualities. Practical 12" x 12" tile size makes installation a snap. The perfect solution for recording studios, auditoriums, home theaters, anechoic chambers, radio stations, and more. Tile size is 12" x 12" x 5". Sold individually. Charcoal gray color.
