

MicroMount IR Target™

Flush mounted into your cabinetry, the MicroMount IR Target disappears from view.

System Status & Talkback End Operational Confusion

Remote control operation of concealed audio/video equipment can be very confusing and sometimes frustrating. Since you can't see the components, you may not know if they are on and available for your use. With Audioplex's revolutionary miniature Remote relay systems, MicroMount IR Target ends operational confusion.

A single ultra-bright two-colored LED lets you know the status of your A/V system from anywhere an IRTarget is located. The LED glows a steady green (system status) when your system is on and ready for use. The LED flashes red (system talkback) if the batteries in your remote control are good and the IRTarget is receiving the command you've sent. If your system is turned off, the LED is also off indicating you will need to return to the equipment and power it up before use.

Stop letting your system control you. Take control of your system with the MicroMount IRTarget and SYS-TAT, system status!

AUDIOPLEX®
TECHNOLOGY

The MicroMount IR Target is the only visible part of an Audioplex Remote Relay system when operating your system with a remote. Installed into your cabinetry, only a 1/2" wide lens reveals its presence.

TECHNICAL DETAILS

Instant Response

The Audioplex MicroMount IRTarget generates a pure carrier frequency, regardless of the noise and interference present. As a result, your components work the first time. You don't have to repeat commands.

Overcomes Sunlight Interference

The Audioplex MicroMount IRTarget will reject the ambient light in your room- even direct sunlight outdoors!

Ultra-Long Range

In real world testing, the MicroMount IR Target delivers more than twice the range of other brands of infrared systems. Your remote can deliver 100' of range indoors and 15 to 20' outdoors in direct sunlight. Additionally, the MicroMount IRTarget offers extremely broad off-axis or at-angle response (+/- 110°). Competitive products rarely work more than 25' away indoors, are intermittent off-axis and do not work at all outdoors.

Wide Compaibility

The MicroMount IRTarget is designed to relay remote control signals within the standard band (which is compatible with the vast majority of brands). Bang & Olufson remotes, two-way remotes that display CD and tuner information on the remote itself, and RCA/Proscan remotes require alternative Audioplex parts.

Lifetime Warranty

Audioplex provides a lifetime warranty guaranteeing the performance and function for the life of the original owner.

Mounting Considerations

Behind speaker Grills

Many brands of in-wall speakers include a 1/2" knockout for the Audioplex MicroMount IRTarget in the speaker baffle. Because of the extreme long range of the MicroMount IRTarget, it is possible to get usable performance with the IRTarget behind cloth or perforated metal speaker grills. You can expect a reduction in distance; typically operating range is reduced to 20 to 25 feet behind perforated metal grills. However, you will enjoy an absolutely invisible installation!

Convenience

Typically, IRTargets are mounted in each room so that you can hold your remote control at a comfortable angle in your favorite seat in each room. Ideal mounting locations include; near your television, behind the grills of your speaker system, in the ceiling in front of you, flush mounted into your cabinetry, or utilize the MicroMount IRTarget's unique miniaturization to creatively hide the IRTarget in a hollowed out book or other knickknack!

Cabinet IR Target Connections

The cable connecting the controller to the connecting point where IR Bugs and IRFloods control your A/V equipment may be up to 1000 feet long.

SPECIFICATIONS

Power:	12 VDC @ 500 mA power supply.
Wire:	3 conductor, 24 gauge minimum. 4 conductor recommended. Unshielded or shielded (Cat 5 recommended).
# of sensors	No limits.
Max. wire run:	1000' on any leg. No maximum total limits.
Compatibility:	Use standard band for all standard remote controls from 32 to 45 kHz. (Note: RCA and ProScan require dedicated 56k sensors). Use high band for B&O, Kenwood, Sony and Revox. Use two-way for Sony and Kenwood remote controls with the ability to display CD and tuner information on the remote.
Dimensions:	3" Deep x .625" Diameter.

Bang & Olufson, RCA, ProScan, Sony, Revox and Kenwood are all registered trademarks.
