ICEpower50ASX2
 2x50W or 1x170W ICEpower Amplifier
 with integrated ICEpower Supply

General Description

The ICEpower50ASX2 is a fully integrated, intelligent audio power conversion solution designed particularly for highly competitive consumer and professional audio products. The ICEpower50ASX2 is EMC and safety approved and the “black-box” completeness allows for fast design-in and minimized time to market. Key benefits include:

- State-of-the-art, high efficiency ICEpower amplification stage based on the patented HCOM modulation and MECC control techniques
- A power supply with selectable mains converter and separate aux converter
- A wide set of features for plug-and play implementation into applications such as active speakers and subwoofers, wireless speakers, multimedia audio, musical instrument amplifiers and distributed audio

The ICEpower50ASX2 is protected against short-circuit, overload and over-heating and includes on-board fuses and EMI filtering to provide a CE and FCC pre-approved design.

The ICEpower50ASX2 is available in two variants with either stereo or mono output configuration. Combined with the auxiliary supply for powering external circuitry and the complete elimination of heat sinks and EMI shields; the ICEpower50ASX2 is the natural choice in any audio application that requires a compact, integrated power solution.

Key Specifications

- 170W @ 1% THD+N, 20Hz – 20kHz, 4Ω, BTL
- 2 x 47W @ 1% THD+N, 20Hz – 20kHz, 4Ω, SE (both channels driven)
- 88W (2Ω) + 22W (8Ω) @ 1% THD+N, 20Hz – 20kHz, SE (both channels driven with asymmetric load)
- Max output voltage / current: 19.5V_p / 20A_p, 4Ω, SE
- Max output voltage / current: 37V_p / 20A_p, 4Ω, BTL
- 125dBA dynamic range (BTL-version)
- 120dBA dynamic range (SE-version)
- THD+N = 0.003% @ 1W (8Ω, 1kHz, SE)
- THD+N = 0.002% @ 1W (8Ω, 1kHz, BTL)
- 81 % total efficiency @ 170W, 4Ω
- CCIF Intermodulation distortion = 0.0002%, 10W, 4Ω, 18.5kHz/1kHz
- ±25V unregulated auxiliary power supply
- Selectable Mains 85-132V_{AC} & 170-264V_{AC}

Key Features

- Fully integrated audio power solution
- Stereo or mono output versions available
- Rugged construction
- Thermal protection
- Over current protection
- Sound optimized soft clipping
- Suitable for CE approved designs
- EMI conforms to: EN55013
EN55020
EN61000-3-2
EN61000-3-3
FCC part 15-B
- Safety conforms to: IEC/UL 60065

The connector interface of the ICEpower50ASX2 modules has five industry standard connectors selected for long-term reliability.

AC Header Specifications (P100)

Type: JST B2P3-VH			
PIN	Function	Description	Type
1	Live	Live AC	Input
2	Neutral	Neutral AC	Input

Table 1: AC connector specifications

Speaker Header Specifications (P101)*

Type: JST B2P-VH			
PIN	Function	Description	Type
1	Vo+	Amplifier output channel 1	Output
2	GND	GND _{channel1}	GND

Table 2: Speaker connector specifications

*P101 is not mounted on the BTL-version.

Speaker Header Specifications (P104)

Type: JST B2P-VH			
PIN	Function	Description	Type
1	Vo+	Amplifier output channel 2	Output
2	GND in SE (Vo- in BTL)	GND _{channel2} *	GND*

Table 3: Speaker connector specifications

* This pin is Vo+ (hot) in BTL version and GND in SE version

Signal Header Specifications (P102)

Type: JST B7B-PH-K-S			
PIN	Function	Description	Type
7	Vin channel 1	Input signal channel 1	input
6	GND	Ground terminal for the signal section.	GND
5	GND	Ground terminal for the signal section.	GND
4	Vin channel 2	Input signal channel 2	Input
3	Thermal	Thermal monitoring pin	Output*
2	OC	Monitor pin amplifier over current	Output*
1	Enable	Amplifier enable	Input/Output*

Table 4: Signal connector specifications

* See "Features" section on page 23

Absolute Maximum Ratings

Absolute maximum ratings indicate limits beyond which damage may occur.

Mains Input Section

115V mains setting

Symbol	Parameter	Value	Units
AC_{max}	Maximum off-line voltage	132	V_{AC}
AC_{min}	Minimum off-line voltage	85 ¹⁾	V_{AC}
F	Mains frequency range $85V_{AC} - 132V_{AC}$	45 – 65	Hz

Table 6: Absolute maximum ratings, mains input section - 115V setting

230V mains setting

Symbol	Parameter	Value	Units
AC_{max}	Maximum off-line voltage	264	V_{AC}
AC_{min}	Minimum off-line voltage	170 ¹⁾	V_{AC}
F	Mains frequency range $170V_{AC} - 264V_{AC}$	45 – 65	Hz

Table 7: Absolute maximum ratings, mains input section - 230V setting

1) The ICEpower50ASX2 will operate at lower levels but the output power will be reduced. If the off-line voltage is too low, the ICEpower50ASX2 switches off.

Auxiliary Supply

Symbol	Parameter	Value	Unit
I_{Vd}	Maximum current draw from Vd (+25V) ²⁾	200	mA
I_{Vs}	Maximum current draw from Vs (-25V) ²⁾	-200	mA

Table 8: Absolute maximum ratings, auxiliary supply

2) If the auxiliary supply on the ICEpower50ASX2 is used with a capacitive load please remember to read the section "Capacitive Loading of the AUX Supply" in the ICEpower50ASX2 designer's manual.

Input Section

Symbol	Parameter	Value	Unit
Vin channel 1 , Vin channel 2	Maximum voltage range on pin	± 3.3	V_p

Table 9: Absolute maximum ratings, input section

ICEpower50ASX2
 2x50W or 1x170W ICEpower Amplifier
 with integrated ICEpower Supply

Output Section

Symbol	Parameter	Value	Units
R_{load}	Minimum load, BTL	3	Ω
R_{load}	Minimum load, SE	2	Ω
$I_{out}^{(3)}$	Maximum current draw from amplifier output	20	A
C_L	Maximal pure capacitive loading	470	nF

Table 10: Absolute maximum ratings, output section.

3) The over-current protection will act to protect the amplifier. (See "Protection features")

Thermal Section

Symbol	Parameter	Value	Unit
T_a	Max. operating ambient temperature (tropical safety conditions tested)	50	$^{\circ}\text{C}$

Table 11: Absolute maximum ratings, thermal section

ICEpower50ASX2
2x50W or 1x170W ICEpower Amplifier
with integrated ICEpower Supply

Power Specifications

Unless otherwise specified. $T_a=25^{\circ}\text{C}$, $f=1\text{kHz}$, $R_L=4\Omega$, 230V mains

Symbol	Parameter	Conditions	Min	Typ	Max	Units
t_{Pmax}	Time of maximum rated output power	170W out. No preheating.	-	120	-	s
P_T	Continuous output power ⁴⁾ without thermal shutdown. (SE, 4Ω) Both channels driven	Thermal stab. @ $T_a = 25^{\circ}\text{C}$.	-	43	-	W
P_T	Continuous output power ⁴⁾ without thermal shutdown. (SE, 8Ω) Both channels driven	Thermal stab. @ $T_a = 25^{\circ}\text{C}$.	-	30	-	W
P_T	Continuous output power ⁴⁾ without thermal shutdown. (BTL, 4Ω)	Thermal stab. @ $T_a = 25^{\circ}\text{C}$.	-	50	-	W
P_T	Continuous output power ⁴⁾ without thermal shutdown. (BTL, 8Ω)	Thermal stab. @ $T_a = 25^{\circ}\text{C}$.	-	100	-	W
P_{SMPS}	Quiescent power consumption (– amplifier disabled)	Enable pin low	-	4	-	W
P_q	Quiescent power consumption (amplifier enabled)	$P_o = 0\text{W}$	-	7	-	W
η	Total power efficiency	$P_o = 100\text{W}$ $P_o = 170\text{W}$	- -	80 81	- -	%
$V_{d_{aux}}$ $V_{s_{aux}}$	Nominal DC voltage	Any combination of mains voltage and output power within specified ranges.	± 16	± 25	± 31	V

Timing Specifications

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
t_{acd}	Power supply start up delay. (nominal mains)	Time from reaching AC_{min} to all power supplies are good and amplifier is active.	-	700	1000	ms

Table 16: Timing specifications

Disturbances on the Mains

The signal on the mains connection is often very noisy and large surge voltages are present. The ICEpower50ASX2 is equipped with mains filtering to suppress surges and noise.

Lightning

To avoid damage of the ICEpower50ASX2 in case of surges caused by lightning, special care and component selection have resulted in capability of withstanding surges up to 5.5kV.

Mechanical Specifications

During development the ICEpower50ASX2 has passed tough mechanical tests to ensure high reliability.

Test	Acceleration	Amount
Unpowered tests: The unit is powered after the test to verify functionality.		
Random vibration	2g _{RMS}	3x20min
Bump	10g/16ms, 2-4 Hz	1000 bumps in each of 6 directions ⁷⁾
Shock	70g/12ms	3 shocks in each of 6 directions ⁷⁾
Powered tests: The unit is tested with power applied.		
Sinusoidal vibrations	2.5mm, 5-10Hz 1g, 10-100Hz	2 hours in each of 3 directions ⁷⁾
Random vibrations	0.01g, 10-20Hz 0.7g _{RMS} -3dB/oct, 20-150Hz	2 hours in each of 3 directions ⁷⁾

Table 17: Mechanical tests

IMD@10W = 0.0002%

CCIF IMD analysis. $R_L = 4\Omega$, $P_0 = 10\text{W}$

TIM vs. output power. $R_L = 4\Omega$,
TIM@10W = 0.003%

TIM FFT analysis. $R_L = 4\Omega$, $P_0 = 10\text{W}$

Figure 8: Intermodulation distortion (BTL)

ICEpower50ASX2
2x50W or 1x170W ICEpower Amplifier
with integrated ICEpower Supply

Power vs. Frequency

Due to the compensating Zobel network in the output stage, the maximum allowable short-term output power is frequency-dependant. The short-term output power is defined as the maximum undistorted ($\text{THD+N} < 1\%$) output power until thermal shutdown occurs. The maximum Full Power Bandwidth is 20 kHz. Above this frequency the Zobel protection circuit may briefly shutdown the amplifier to protect the Zobel network from damage.

Note that this limitation will never cause any problems when the amplifier is fed a music signal at the input, but the limit must be taken into consideration when the amplifier is tested under laboratory conditions using sine waves or noise signals.

Output Impedance

The output impedance is measured by feeding $1A_{\text{RMS}}$ into the output of the amplifier and measuring the voltage on the output. The voltage then corresponds to the output impedance. The output impedance is measured directly on the terminals on the PCB.

The figure below shows the output impedance from 100Hz – 20kHz for the SE-version.

Figure 9: Measured voltage at output terminals while feeding $1A_{\text{RMS}}$ into the output of the amplifier at PCB.

BTL Power Dissipation

Mains Voltage V_{IN} : 115V/50Hz

BTL-version	Load impedance [Ω]	Rated power [W]	Line power [W]	Output power [W]	Dissipated power [W]
Idle			7		7
1/8 rated power (pink noise)	4	150	30	19	11
1/8 rated power (pink noise)	8	95	20	12	8
Continuous output power	4	50	66	50	16
Continuous output power	8	95	113	95	18

Mains Voltage V_{IN} : 230V/50Hz

BTL-version	Load impedance [Ω]	Rated power [W]	Line power [W]	Output power [W]	Dissipated power [W]
Idle			7		7
1/8 rated power (pink noise)	4	170	32	21	11
1/8 rated power (pink noise)	8	100	21	13	8
Continuous output power	4	50	66	50	16
Continuous output power	8	100	116	100	16

Table 19: Dissipated power vs. Output power (BTL)

Loading

With its low output impedance, the ICEpower50ASX2 is designed to be unaffected by loudspeaker loading characteristics. However, care should be taken with *purely* capacitive loads.

Traditionally, amplifiers have been tested extensively in laboratories with purely capacitive loads. This was done to test the amplifier's stability and performance but it does not relate to any normal speaker load as even electrostatic speakers do not present a purely capacitive load to the amplifier but include a resistive part as well. The maximum purely capacitive load allowed is 470nF.

with integrated ICEpower Supply

Features

The ICEpower50ASX2 has a number of useful features as described below.

Overcurrent Monitor Pin

Figure 11 shows the internal circuit of the OC pin interface. This pin is high (+5V) under normal conditions. If a short circuit is detected on the speaker output terminals, the pin is pulled low (0V).

This pin is also activated by other protection features such as Zobel protection and saturation detection on the output. If any of these protection features are activated, the pin will be pulled low (0V). This pin is only an output.

Figure 11: Over Current monitor pin interface

Thermal Monitor Pin

Figure 12 shows the internal circuit of the thermal pin interface. This pin is high (+5V) under normal conditions. If the amplifier temperature becomes too high, the pin is pulled low (0V). This can happen if the continuous power drawn from the amplifier exceeds the limits listed on p. 6 and p. 7. This pin is only an output.

Figure 12: Thermal monitor pin interface

Enable Pin

The enable pin can enable/disable the amplifier. If the pin is left unconnected, then the level is high (+5V) and the amplifier is enabled. If the pin is pulled low (0V) externally, the amplifier will be disabled.

The enable pin will also be pulled low by the internal protection circuitry if the amplifier temperature becomes too high or a mains under-voltage is detected. This pin is bidirectional.

Figure 13: Enable pin interface

2x50W or 1x170W ICEpower Amplifier
with integrated ICEpower Supply

Auxiliary Power Supply

The auxiliary supply can be used to power an external circuit such as a preamplifier or an equalizer/crossover. Remember that this supply is unregulated.

When using this AUX supply, please remember to read the sections "Shielding and Grounding of Audio Signals" and "Capacitive Loading of the Aux Supply" in the ICEpower50ASX designer's manual.

NOTE:

The Vd and Vs outputs are fused. Even brief overload or short circuit will blow the fuses!

To maintain long term power handling and the effects of inrush current, the fuses on the module are 400mA types. To ensure no unexpected burning of the fuse, the maximum output current drawn from the aux supply should not exceed 200mA.

Figure 14: Auxiliary supply equivalent diagram

ICEpower50ASX2

with integrated ICEpower Supply

Protection Features

The ICEpower50ASX2 is equipped with several protection features for surviving overload without damage. The block diagram below illustrates the different protection features.

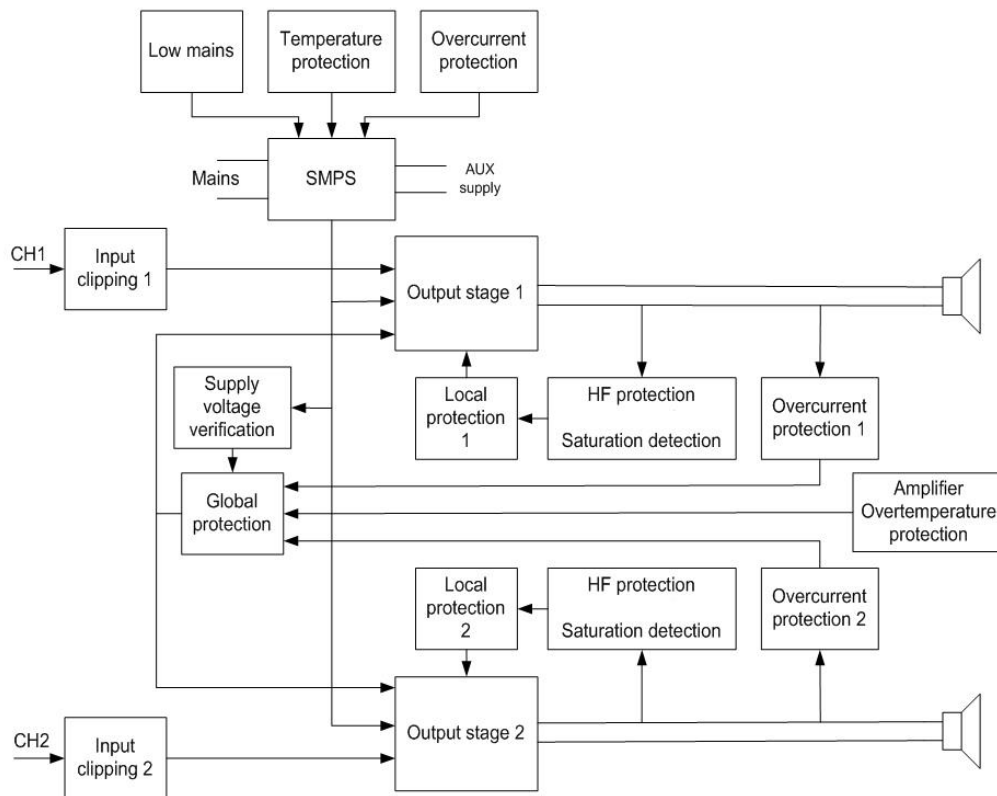

Figure 15: Protection schematic

Power Supply Protection

The power supply of the ICEpower50ASX has two protection circuits; overtemperature and overcurrent.

The temperature protection will be activated if the absolute temperature of the circuit is too high. This can be caused by high ambient temperature, high load (amplifier and AUX supply) for a long time or a combination of these two parameters.

The overcurrent protection will be activated if the output current to amplifier and AUX is too large. Please remember that the AUX supply is protected by fuses.

If one of these protection features is triggered, the power supply either limits its output power or shuts down. In case of a shutdown, the power supply will rapidly try to restart if the circuit's temperature is OK.

ICEpower50ASX2
2x50W or 1x170W ICEpower Amplifier
with integrated ICEpower Supply

Amplifier Local Protection

The ICEpower50ASX2 has a local protection circuit for each of the two audio channels. This local protection handles HF protection and saturation detection. If one of these protections features becomes active on one channel, it will only influence on the channel where the error occurred.

The HF protection circuit is implemented to protect the Zobel network against ultrasonic signals (greater than 20kHz). This protection circuit has a build-in time constant so it is possible to deliver a high frequency, high amplitude signal for a short time.

Amplifier Global Protection

There are two global protection features in the 50ASX2 amplifier; an over temperature protection and an overcurrent protection.

The over temperature protection will only occur if the P_{RMS} is greater than the specified Continuous Output Power. In normal use, the amplifier will not shut down if properly mounted.

The overcurrent detection circuit is included in the ICEpower chipset by detecting saturation of the control system. This condition will typically be allowed in 100ms to 500ms which is enough to avoid accidental shutdown at peak currents during high music output. The current limit is set to 20A.

Input/Output Interface

Input Stage

The single ended input buffer has an anti-aliasing filtering and a DC capacitor. The input impedance of the signal input section is minimum $8k\Omega$ over the audio bandwidth, which is an acceptable loading condition for pre-amps, active crossover outputs etc

Figure 16: Single ended input buffer

ICEpower50ASX2
2x50W or 1x170W ICEpower Amplifier

BTL module setup

When using the BTL module, the wiring diagram on fig. 17 should be followed. Note that it is the channel 2 speaker terminal which is used on the BTL module (the channel 1 terminal is not mounted on the board).

Figure 17: Wiring diagram for the BTL module

Output stage

The output stage is a half bridge topology with a 2nd order filter. The filter design is a part of ICEpower's proprietary MECC topology and has been chosen as the optimal solution between demodulation characteristics, efficiency and filter compactness. The essential output characteristics are:

- The switching residual on the output primarily consists of a single frequency component at the carrier fundamental f_s .

The system bandwidth is 130 kHz in 8Ω (SE) and 100 kHz in 8Ω (BTL).

Figure 18: SE output filter section with compensating Zobel network

Figure 19: BTL output filter section with compensating Zobel network

Operational Timing Diagram

The following diagram shows selected signals during power up/down (nominal mains).

Timing for changes in mains and enable levels

1. 700ms typ.
2. 2ms typ.
3. 100µs typ.
4. 2ms typ.
5. 1200ms max. (load/power dependent)
6. 50ms typ.

OC and Thermal pins have the same response delays as the Enable pin from when the OC or thermal error is detected.

Figure 20: Timing – enable and mains

Thermal Design

Thermal design is generally a great challenge in power amplifier systems. Linear amplifier designs operating in class A or AB are normally very inefficient and therefore equipped with extensive heat sinking to keep the transistor junction temperature low. The ICEpower50ASX2 is based on highly efficient ICEpower switching technology providing high overall efficiency characteristics at all levels of operation.

Part of the “component” philosophy of the ICEpower50ASX2 module is to provide a self-cooled component thus eliminating the need for special attention to thermal design.

The ICEpower50ASX module is designed for music reproduction, which means that the output power of the amplifier will never be continuous. Research has shown that the RMS level of any music signal does not normally exceed 1/8th of the peak value and the power supply is therefore designed for large short-term power handling and lower continuous power handling. If the average output power of the ICEpower50ASX exceeds 43W @ 4Ω (SE-version with both channels driven) or 50W @ 4Ω (BTL-version) for a long time at 25°C ambient temperature, the module will reach its maximum allowable temperature and the temperature protection will be activated.

Further information about thermal design can be found in the ICEpower ASX designer’s manual.

Safety Standards

The ICEpower50ASX2 has been safety approved by UL to ease the design-in procedure and complies with the following standards:

- Europe: IEC 60065 7th ed. + AM1 + AM2
IEC 60065 8th ed.
EN 60065:2002 + A1:2006 + A11:2008 + A2:2010
- US: UL 60065, 7th Edition, 2013-07-24
CAN/CSA-C22.2 No. 60065-03, 1st Edition + A1:2006 + A2:2012

EMC

- EN 55032: Note 1

Note1: Depends on cable routing on the mains/amplifier outputs and load characteristics. Connecting safety ground to the mains side/ Additional filtering may be needed.

Safety Class

Class 2 (without earth)

ESD Warning

ICEpower products are manufactured according to the following ESD precautions:

- IEC 61340-5-1: Protection of electronic devices from electrostatic phenomena. General Requirements.
- IEC 61340-5-2: Protection of electronic devices from electrostatic phenomena. User Guide.
- ANSI/ESD-S20.20-1999: Protection of Electrical and Electronic Parts, Assemblies and Equipment.

Further handling of the products should comply with the same standards.

The general guarantee policy of ICEpower a/s does not cover ESD damaged products due to improper handling.

Packaging and Storing

Dimensions and weight:

Package	Quantity	Dimensions (w x d x h)	Gross Weight
Carton	54	39x42x27 cm	TBD
Pallet	432	60x80x124 cm	TBD

ESD safe cardboard is used for wrapping.

Order codes	Description	Part number
ICEpower50ASX2(BTL)	1x170W ICEpower Amplifier with integrated ICEpower Supply	8003225
ICEpower50ASX2(SE)	2x50W ICEpower Amplifier with integrated ICEpower Supply	8002660

Storage humidity

Do not expose the pallets to rain or humidity levels higher than 85%.

Storage temperature

The pallets are to be stored at temperatures from 0°C to 70°C.

Stacking

Pallets may not be stacked on top of each other.
